B. $3^{15} / 16^{\prime \prime}$ air space between pickets.
2.05 Fabrication:
A. Fence panels are fully assembled and fabricated in standard length of $901 / 2^{\prime \prime}$ and standard heights of 34 ", $46^{\prime \prime}, 58^{\prime \prime}, 70^{\prime \prime}, 82^{\prime \prime}$, $94^{\prime \prime}, 106^{\prime \prime}$, and $118^{\prime \prime}$. All panels comply with requirements indicated for materials, thickness, design and details of construction. B. Grommets are inserted into pre-punched rails, and then the pickets are inserted through the grommets.
C. Pickets are attached to the rail via a patented slide lock system.
D. All components are accurately cut and drilled to receive hardware, fasteners and accessories.
E. Panels shall be capable of supporting a 680 lb . load (applied at mid-span) without permanent deformation. Panels shall be rackable to a $24^{\prime \prime}$ change in grade.
2.06 FINISH:
A. Materials are coated with the Fortress Shield process including galvanization, zinc phosphate, electrodeposition (E-coat), and architectural grade powder coat.
B. Metal parts are assembled and finished individually prior to shipment.
C. Galvanized steel fence components are cleaned with a non-petroleum solvent followed by the application of a sealing zinc phosphate coating.
D. Immediately after sealing, a two-step finishing process consisting first of an electrostatic dipping process in a lead free high corrosion resistant epoxy resin leaving a coating of approximately 20 microns followed by a thermosetting carboxyl polyester resin top coat with a minimum dry film thickness of 60 to 70 microns. The second coating will be applied by the electrostatic spray process.

## PART 3 EXECUTION

Preparation

Stake layout showing locations of all gates and posts. Contact "CALL BEFORE YOU DIG" prior to beginning any excavation work.
3.02 INSTALLATION
A. Install fences in accordance with written instructions and in accordance with authorities having jurisdiction.
B. Concrete Set Posts: Drill hole in firm soil. Posts holes will be a minimum of 36 " deep (environmental conditions or local codes may require a greater depth). Fence post shall be spaced 95 " $\pm 1$ " on-center to accommodate installation of brackets on $21 / 2 "$ square post. For non-level installations the on-center post spacing must be measured along the grade
C. Installation is to conform to the specifications referenced in Section 1.02 of this specification.
D. Install Fortress brackets onto fence section and posts as indicated in printed instructions for specific fence style. Attach fence sections to brackets with approved fasteners and techniques to insure that fence sections are parallel to grade within $1 / 4$ " in 12 feet.
E. Gate Installation: Install in accordance with printed instructions. Do not mount gate from wall of a structure. Provide gate post on both sides of a gate. For double drive gate installation, provide concrete center drop to foundation depth and drop rod retainers at center. Lubricate to insure smooth operation and verify proper latch operation.
3.03 ClEANING
A. Remove all cutting and drilling chips that are attached to the fencing, post, brackets or additions to prevent corrosion.
B. Repair scratches and other installation-incurred damage. Using a spray paint of the appropriate color that includes a zinc additive, repaint and seal any scratches or holes drilled in the fencing, post, brackets, or additions to prevent rust from forming. C. Clean up debris and unused material, and remove from site.
